Technical

diversity.

Whether for operating tables or workshop trolleys – we have over 5,000 caster variations.

Everything starts with a vision: a caster that performs better, conserves our resources – and is perfect for the application.

At STEINCO, an idea becomes a well-thought-out concept. Together with our customers, we define all the relevant criteria – from the duty cycle, environment, and choice of materials to achieving the required performance and budget goals. Our decades of industry experience flow directly into the development process, resulting in reliable, high-performance solutions.

01

Design and development

Our engineers realize your ideas with outstanding technical precision – using simulation and a wealth of experience down to the last detail.

We deploy leading-edge software and technologies to develop the optimum product. Load simulations, installation space analysis, and standard requirements are taken into account at an early stage. Direct coordination between our engineering and production teams enables us to create and implement technically well-thought-out solutions with great precision.

100%

in-house design.

We develop patented customer solutions with a head start in innovation.

02

Selection of materials

03

Only materials that meet our high standards become part of our casters: we select materials with a view to quality, sustainability, and performance.

In doing so, we consider mechanical resilience, corrosion resistance, ecological factors, and international standards. Reliable supplier relationships and regular testing processes ensure permanently high material quality.

ISO-certified.

STEINCO is certified according to DIN EN ISO 9001:2015 (quality management) and DIN EN ISO 14001:2015 (environmental management) – a solid foundation for material selection, processes, and sustainable operations.

Precision in plastic injection molding

Our innovative plastics production is the heart of STEINCO. Our injection molding facilities produce components for our casters and wheels – using efficient, high-precision manufacturing technologies.

As we produce almost everything, from standard components to complex, highly specialized solutions, we can guarantee the same high quality in everything we do. Highly automated systems, in-house tool production, and close collaboration between our engineering and manufacturing teams ensure outstanding precision and maximum reliability without external assistance.

www.steinco.com/about-steinco

> 90 %

vertical integration.

Our level of vertical integration is over 90% across the entire production process, making us independent of conventional supply chains for low-risk in-house manufacturing.

04

Systematic assembly

05

Everything comes together here: carefully crafted using state-of-the-art technology, the finished product is ready for use.

Our assembly combine manual precision with technical efficiency. Depending on the type of caster, we use automated processes or hand-guided assembling tools tailored to the product and its requirements. Integrated test processes and defined assembly lines guarantee the reliability of the end product.

Expertise:

in assembly as in many other areas.

We rely on our own junior staff, who we train exclusively in-house. With our technical and commercial apprenticeships, we invest specifically in expertise that stays with us in the long term.

Quality without compromise

260,000 kWh

of solar power annually.

We're committed to meeting our own high standards when it comes to sustainability. Our solar power system generates up to 260,000 kilowatt-hours of electricity each year – enough to power approximately 60 average households of four people.

State-of-the-art testing techniques and highly qualified personnel guarantee reliability, safety, and longevity.

At STEINCO, quality is not just an empty promise, but a measurable standard. From receiving the raw materials to the final inspection, we check our casters for functionality, load capacity, and durability – both automatically and manually.

06

Logistics and shipping

Well packaged, perfectly organized:
our logistics department ensures fast
and reliable deliveries – worldwide.

From picking and packing to the final delivery,
each step is closely coordinated. Digital pro-
cesses, flexible warehouse concepts, and ex-
perienced logistics partners ensure that every
shipment reaches the customer on time and in
perfect condition.

100%

LED lighting.

To provide our team with ideal visibility,
we've upgraded all our facilities to include
modern LED lighting. This not only pro-
vides optimal illumination, but also signifi-
cantly reduces our energy consumption.

07

Performance in series

An idea turned into movement – today, in medical technology and many other applications, our innovations ensure precise mobility when every second counts.

The requirements of our customers are continuously incorporated into our product design and development processes, resulting in optimal mobility solutions that stand the test of time.

Want to design your own product?
With our online configurator, you
can specify your dream caster in
just a few clicks.
